CLIMATE CHANGE — AN EXPRESSION OF SOUNDS VISUALS, WORDS AND SCIENCE.

The project will bring together artists, educators and scientists in an informed discussion and expression about climate change and its effects in Utah and beyond. The collaboration is intended to culminate in events at the Utah Museum of Natural History around Oct. 5, 2020, at a time when the U will be in the national spotlight.

The UMNH is a uniquely dramatic venue for this event, as it documents changes in nature on a large time scale, and also informs us of changes to come. The event will include new compositions, sound installations and poetry, as well as presentation by researchers on effects of climate change that is affecting us right now.

In addition to the U collaborators, several nationally prominent artists and scientists will be invited to present new works/research to emphasize the national and global scale of the issue — with each piece designed to have lasting impact through repeat presentations and performances globally.

COLLABORATORS

HASSE BORUP
Project Owner
ELISABET CURBELO GONZÁLEZ
WENDY WISCHER
College of Fine Arts

KATHARINE COLES
JULIA CORBETT
College of Humanities

JOHN LIN
College of Mines and Earth Sciences

REBECCA MENLOVE
Natural History Museum of Utah
